Hiring Team
Voloridge Investment Management
Jupiter, FL

Re: Quantitative Developer Intern 2027

Dear Hiring Team,

I am writing to apply for the Quantitative Developer Intern 2027 position at Voloridge Investment Management. I am a Physics undergraduate at Stony Brook University (expected graduation May 2027) with hands-on experience building software and data pipelines on large datasets in research environments. Voloridge's integration of advanced data science and mathematics into systematic, market-neutral strategies is exactly the kind of rigorous, engineering-driven quantitative work I want to pursue, and I am excited to contribute to your Research development team onsite in Jupiter.

In my research at Brookhaven National Laboratory and the Center for Frontiers in Nuclear Science, I develop analysis workflows in **Python** and **C++** on high-volume scientific datasets. My work includes building reproducible pipelines with **Git**, implementing machine learning tooling with **scikit-learn**, and applying statistical methods and numerical techniques to extract reliable results from complex data. This experience has trained me to write careful, maintainable code, validate outputs rigorously, and collaborate with a technical team while documenting methods clearly—skills that map directly to software and data engineering in quantitative finance.

Beyond my research, I have pursued quantitative finance independently. I am building a **market microstructure forecasting** project in Python (**pandas**, **NumPy**, **scikit-learn**) that ingests limit order book data, engineers features, and evaluates models with walk-forward validation. I also completed J.P. Morgan's Quantitative Research Forage simulation, covering statistical analysis, derivatives pricing, and credit-risk modeling. These projects reflect the curiosity, problem-solving mindset, and strong mathematical foundation I would bring to Voloridge—and my eagerness to learn your technology stacks, development standards, and best practices in quantitative investment.

I am highly motivated, detail-oriented, and comfortable working in team settings where clear communication matters. I am fully available to work onsite in Jupiter for Summer 2027 and welcome the opportunity to relocate for the internship. Thank you for your time and consideration. I would welcome the chance to discuss how my background in computational data analysis and quantitative modeling can support Voloridge's development team.

Sincerely,

Rojae Mighty
