Junson Capital
New York, NY

Re: Investment / Off-cycle Intern – Alternative Investment Division

Dear Hiring Team,

I am excited to apply for the Investment / Off-cycle Intern position in Junson Capital's Alternative Investment Division. I am a physics undergraduate at Stony Brook University with experience in quantitative research, data analysis, and computational modeling. Junson's work across alternative investments, private credit, and structured products strongly appeals to me because it offers the opportunity to apply rigorous analytical thinking to investment research and financial decision-making.

As a DOE Science Undergraduate Laboratory Intern at Brookhaven National Laboratory and an undergraduate researcher at Stony Brook's Center for Frontiers in Nuclear Science, I analyze large and complex datasets using Python, C++, ROOT, and machine-learning methods. My work involves framing research questions, testing assumptions, building reproducible workflows, and communicating results clearly to collaborators. These experiences have developed the disciplined, detail-oriented approach needed to evaluate information carefully and support sound investment analysis.

I have also developed a market microstructure forecasting project using limit-order-book data. In this project, I engineer order-flow and price features, evaluate models with walk-forward validation, and incorporate transaction costs into backtesting. Through J.P. Morgan's Quantitative Research virtual experience, I gained exposure to commodity analysis, derivatives pricing, and credit-risk modeling. Together, these experiences have strengthened my interest in financial markets and my ability to assess data, recognize model limitations, and translate quantitative findings into clear conclusions.

I would be eager to bring initiative, strong research and writing skills, and a collaborative mindset to Junson Capital's Alternative Investment Division. The opportunity to learn from a global investment and asset-management firm while contributing to research across diverse asset classes would be an exciting next step in my development. Thank you for considering my application. I would welcome the opportunity to discuss how my analytical background and interest in alternative investments could contribute to Junson Capital.

Sincerely,

Rojae Mighty
