Morgan Stanley
New York, NY

Re: Private Wealth Management Summer Internship

Dear Hiring Team,

I am excited to apply for Morgan Stanley's Private Wealth Management Summer Internship. I am a physics undergraduate at Stony Brook University with experience in quantitative research, data analysis, and technical communication. Morgan Stanley's structured program, with its focus on financial planning, investment strategy, and presenting to an ultra-high-net-worth prospective client, particularly appeals to me because it combines rigorous analysis with the judgment and communication needed to serve clients effectively.

As a DOE Science Undergraduate Laboratory Intern at Brookhaven National Laboratory and an undergraduate researcher at Stony Brook's Center for Frontiers in Nuclear Science, I analyze large, complex datasets using Python, C++, ROOT, and machine-learning methods. My work requires translating open-ended questions into analytical approaches, testing assumptions, organizing results, and communicating conclusions to collaborators. These experiences have strengthened my research discipline, attention to detail, and ability to explain quantitative work clearly—skills I would bring to understanding client needs and developing thoughtful financial-planning recommendations.

I have also developed a market microstructure forecasting project using limit-order-book data, where I engineer order-flow and price features, evaluate models with walk-forward validation, and account for transaction costs in backtesting. Through J.P. Morgan's Quantitative Research virtual experience, I gained exposure to commodity analysis, derivatives pricing, and credit-risk modeling. Together, these projects have reinforced my interest in financial markets and taught me to approach data-driven decisions with curiosity, critical thinking, and a clear understanding of model limitations.

I would be eager to contribute initiative, strong writing and research skills, and a collaborative mindset to Morgan Stanley's Private Wealth Management team. I am especially motivated by the opportunity to build a broad foundation in wealth management while learning how to synthesize financial analysis into a compelling, client-centered presentation. Thank you for considering my application. I would welcome the opportunity to discuss how my analytical background and interest in investment strategy could contribute to the program.

Sincerely,

Rojae Mighty
